1. Business Process relations not used on a diagram.xml

1.1 Description

Each SequenceFlow or MessageFlow should be visible on a diagram. If that is not the case, that means that something is wrong.
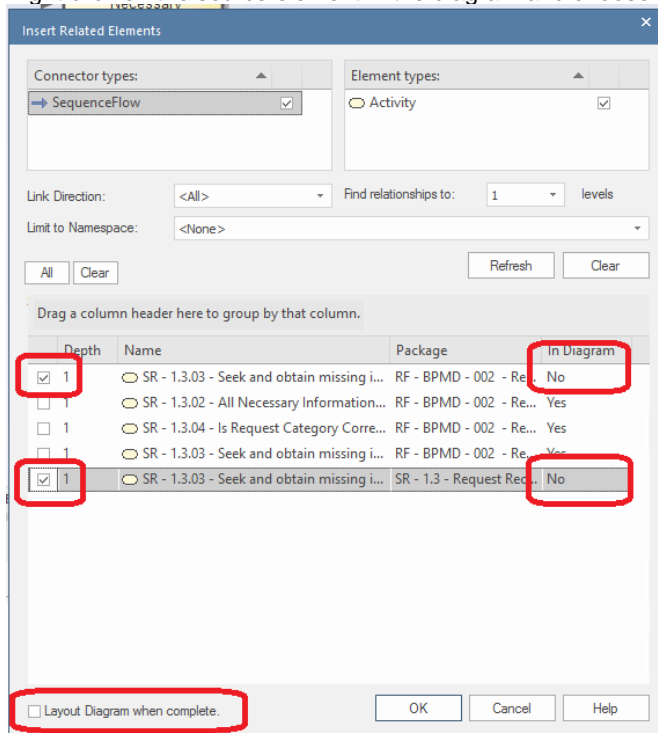

That could be

- The relation is hidden
- Either the source or target element is not show in the diagram.

1.2 Solution

1.2.1 Source or target not on diagram

- Right click on the source element in the diagram and choose "Add Related Element"

  - o Check the checkbox next to each element that has **No** in the column **In Diagram**
  - o Make sure to uncheck the checkbox **Layout Diagram when complete**
- The missing elements will be added to the diagram, and will make the relations visible.
- For each of these relations decide whether the element should stay on the diagram, or if the relations should be deleted from the model.
- To delete the relation select it in the diagram and press Ctrl-Del
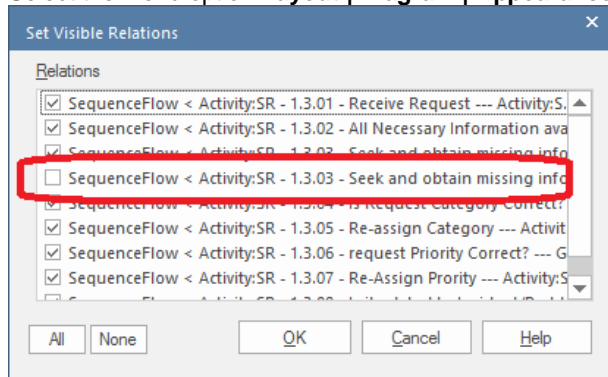

1.2.2   Relationship hidden

If both source and target element are visible on the diagram, then the relation could be hidden.

- Select the menu option **Layout | Diagram | Appearance | Set Visible Relations**

- Make sure all checkboxes are checked.
- Delete the relationship from the diagram if it is not needed.
